PULP AND SAWLOGGED 1978  
SOIL SCARIFICATION

Tarkine March 2010 show by Pete Godfrey

32 years growth after clearfelling, this looks like a cardboard town in a hollywood western. Doesn't seem to be anything behind the propaganda screen

Arthur River Forest Drive Sumac 1D spur road March 2010

Sumac 1D spur road

March 2010

March 2010 Sumac 1D spur road. This is what happens to HCV forests in Tasmania

What was there and what is left Sumac Spur 1D Tarkine March 2010

Obviously most of this coupe was rubbish

Sumac 1D track, doesn't look like they wanted many logs here. Most of the myrtle has been left to burn.

May have been a bit of minor species timbers here but what the heck they only want the eucalypts to pulp anyway.

Tiger grain Myrtle, used for top end woodworking, such as musical instrument backs and sides. It costs \$3200 per cubic metre for sawn wood and can fetch up to \$31,500 in veneer form.

Tiger grain Myrtle Forestry Tasmania left  
heaps of this behind they must have only  
wanted the eucalypts.
